**Need help with building pentaho-kettle from github** May 9, 2019 8:26 AM

I have problems building pentaho-kettle from github, either by cloning or using latest release, build always fails:

[ERROR] Failures:

**Re: Need help with building pentaho-kettle from github** May 9, 2019 9:16 AM

Hello [Nikola Garafolic](#),

The error seems to be on the test phase so if you just want to compile, try using "-Dmaven.test.skip=true" (it'll skip testing).

Need help with building pentaho-kettle...

Having said that, you should try to identify the test that is failing and find out why it's failing:

Please refer to /home/xx/Downloads/pentaho-kettle/plugins/pur/core/target/surefire-reports for the individual test results.

Please refer to dump files (if any exist) [date]-jvmRun[N].dump, [date].dumpstream and [date]-jvmRun[N].dumpstream.

It may be something on your system configuration or (less probable) some error on the code/test...

Regards,

Sérgio Ribeiro

**Re: Need help with building pentaho-kettle from github** May 9, 2019 9:20 AM

Hi, thanks for response. Will try but on github they mention skipping tests is not recommended, that's why I didn't skip them.

Sergio Ribeiro 24 posts since May 4, 2018

**Re: Need help with building pentaho-kettle from github** May 9, 2019 12:26 PM

As a rule of thumb, if there're tests, they **shouldn't** be ignored: they help prevent changes that will introduce errors (or behaviour differences).

If you're using code from the master branch, it's very difficult to have a test failing because of a code change (but not impossible). My suggestion to skip the tests was only so that you could have a functional version...

There're a few tests that are "very sensible" on how much resources they can use - It's not uncommon having tests (momentarily) failing from time outs, memory exhaustion or other sporadic problem...

As I said on my former reply, you can look into the result files to check why the test failed. If you find an error, you may report it!

Oh, do you use the "-U" (or "update-snapshots") option? If not, you may be using some wrong/old dependency...

Regards,

Sérgio Ribeiro

**Re: Need help with building pentaho-kettle from github** May 10, 2019 6:01 PM

All Pentaho maven project builds fail by default when there is a failing test. This behavior is controlled by the 'maven-surefire-plugin.testFailureIgnore' property

in the global parent pom here: <https://github.com/pentaho/maven-parent-poms/blob/master/pentaho-ce-parent-pom/pentaho-ce-jar-parent-pom/pom.xml#L39>

So instead of merely not running the unit tests with skipTests, you can override this behavior for all your local builds by adding this property to your settings.xml and setting it to 'true.'

Here is an example using a settings.xml profile:

```
<profiles>
  <profile>
    <id>default</id>
    <activation>
      <activeByDefault>true</activeByDefault>
    </activation>
    <properties>
      <maven-surefire-plugin.testFailureIgnore>true</maven-surefire-plugin.testFailureIgnore>
    </properties>
  </profile>
</profiles>
```

You can also control it on any individual command line build like this:

```
`mvn clean install -Dmaven-surefire-plugin.testFailureIgnore=true`
```

This will run all the tests, but not fail your build if any tests fail. This can be helpful, but because maven won't aggregate all the test results at the end of your multi-project build log, it is easy to miss those failing tests. This method is recommended when you have a CI platform like Jenkins doing your build and are using a plugin to aggregate the test results.
